

is for Quantitative

The **Sapphire™ NIR-Q**.
Because total protein
normalization is the new
normal for Western blotting.

With journals preferring total protein normalization for quantitative Western blots, having a multi-channel imager is key. The **Sapphire™ NIR-Q Biomolecular Imager** gives you not one, not two, but three channel Western blot detection for more efficient quantitative workflows: two channels for multiplex protein detection and a third channel for total protein normalization. No stripping, no reprobing, no compromises.

Seamlessly fit total protein normalization into your workflows with the Sapphire™ NIR-Q Biomolecular Imager—learn more at azurebiosystems.com/Sapphire-NIR-Q
